MAH-MBA/MMS-CET 2027

Her CET Study Space

Study Roadmap, Progress Tracking and Mock Analysis

A friendly guide for consistent practice, honest tracking and steady improvement.

Prepared 27 October 2026

2027 exam date and final rules must be checked against the official CET Cell brochure when released.

Welcome: a plan she can actually follow

This system is built to make study feel organised, manageable and visible. It is not a promise of a particular score. Its purpose is to show what she studied, what improved, where mistakes repeat, and what the next best action should be.

The system has three parts:

- **Interactive study space (HTML):** a friendly dashboard that works in a browser, saves in that browser on that device, and lets you add sessions, update topics, record mocks and export a backup.
- **Excel progress tracker:** a workbook for anyone who prefers spreadsheets. Its dashboard calculates topic completion, hours, accuracy and logged weekly progress from the other tabs.
- **This PDF handbook:** the readable reference for the routine, 24-week roadmap and rules for reviewing progress.

Use one of the trackers as the main record. To keep the two trackers in sync, you must enter the same session in both or use one as the source of truth; they do not sync with each other automatically.

1. How to get started

First 15 minutes

1. Open the interactive HTML file in a browser, or open the Excel workbook.
2. Start with a baseline diagnostic. The first score is a starting point, not a judgement.
3. In the Topic Tracker, mark a chapter **Not Started**, **In Progress**, **Done**, or **Needs Revision**.
4. After each focused session, add one row to the Daily Log: date, week, subject, topic, minutes, number of questions attempted, number correct, session status and the next action.
5. After each test, record the score and review the errors before moving to another test.
6. Every Sunday, look at the error patterns and select the two priorities for the following week.

What each measure means

Measure	What it tells you	What it does not tell you
Topic completion	How many listed topics have been marked Done	Whether the entire syllabus is mastered forever
Sessions completed	Whether planned study is being carried out	How deeply a topic was understood
Study hours	Time actually recorded	Whether the time was focused
Practice accuracy	Correct answers divided by attempted questions	Whether she can yet do the questions at exam speed
Mock score	Current performance on one specific test	A guaranteed final score or percentile
Confidence (1–5)	Her own sense of how secure the topic feels	A substitute for timed practice results

The useful habit is to read the numbers together. For example, a topic marked Done with low practice accuracy should move to Needs Revision rather than being ignored.

2. A realistic daily routine

The standard target is about **2 hours 15 minutes** of focused work. It is a target to organise the day, not a reason to feel guilty if one session needs to be shortened. A focused 45-minute block is better than pretending that two distracted hours count as study.

Block	Time	What to do	Definition of done
Quantitative Aptitude	50 min	10 min formula recall, 20 min concept/examples, 20 min questions	A short set is solved and mistakes are marked
Logical Reasoning	50 min	Review the rule/diagram, study examples, solve a timed set	The diagram or reasoning steps are written clearly

Block	Time	What to do	Definition of done
VARC maintenance	20 min	Rotate RC, vocabulary, grammar, cloze or jumbled paragraphs	A small set is completed and reviewed
Error log	15 min	Review wrong, guessed and slow questions	Each important error has a cause and a next action

On a very busy day, use a minimum version: 25 minutes on one priority topic, 10 minutes of questions and 5 minutes to log mistakes. Keep the habit alive, then return to the regular plan when possible.

3. Weekly rhythm

- **Monday–Thursday — learn and practise.** Complete the week's core concepts and solve focused questions. Avoid collecting too many half-finished chapters.
- **Friday — catch up.** Finish the most urgent unfinished item, then solve a mixed set and update the formula/error list.
- **Saturday — test and review.** Take the scheduled diagnostic, mini-test, sectional or mock. Analyse wrong, guessed and slow questions on the same day.
- **Sunday — rest and plan.** Rest. If behind, do one short catch-up block rather than moving every unfinished item into the next week.

A week is reasonably complete when the main concepts have been studied, questions have been attempted, errors reviewed and a next step recorded. Do not mark a topic Done just because a video or chapter was completed.

4. The 24-week roadmap

Planned start: Wednesday, 28 October 2026. The 24-week sequence ends in mid-April 2027 if followed continuously. The actual exam date is not assumed here; adjust the later mock volume when the official 2027 schedule is released.

VARC has already been covered, so it stays in maintenance mode: short RC practice, vocabulary/grammar recall and mixed verbal questions. The core new learning time goes to Quantitative Aptitude, Logical Reasoning and Abstract Reasoning.

Phase 1 — Build the base (Weeks 1–4)

Week 1 · 28 October–3 November

- **Quant:** Simplification and Number System.
- **Logical Reasoning:** Alphabet Test and Coding–Decoding.
- **Abstract Reasoning:** Coding patterns and basic visual patterns.
- **VARC:** One RC on three days; vocabulary/grammar on other days.
- **Milestone:** Timed baseline diagnostic. Record what felt difficult; do not judge the score.

Week 2 · 4–10 November

- **Quant:** HCF/LCM, Surds and Indices.
- **Logical Reasoning:** Blood Relations, Order/Ranking and Directions.
- **Abstract Reasoning:** Directions and visual series.
- **VARC:** RC details/inference and a small vocabulary recall set.
- **Milestone:** A 20-question Quant mini-test and a 20-question LR mini-test.

Week 3 · 11–17 November

- **Quant:** Linear/Quadratic Equations and Averages.
- **Logical Reasoning:** Syllogisms and Inequalities.
- **Abstract Reasoning:** Non-verbal patterns.
- **VARC:** Sentence improvement and error spotting.
- **Milestone:** 25-question timed Quant set.

Week 4 · 18–24 November

- **Quant:** Percentages and Profit/Loss.
- **Logical Reasoning:** Input–Output and Letter Series.
- **Abstract Reasoning:** Pattern drills and missing numbers.
- **VARC:** One RC and review of wrong answers.
- **Milestone:** 25-question timed Reasoning set.

Phase 2 — Arithmetic and reasoning patterns (Weeks 5–8)

Week 5 · 25 November–1 December

- **Quant:** Simple and Compound Interest; Ratio and Proportion.
- **Logical Reasoning:** Seating Arrangement basics. Draw a clean base diagram before placing people.
- **Abstract Reasoning:** Figure-series practice and visual pattern changes.
- **VARC:** Cloze tests and grammar drills.
- **Milestone:** 50-question mixed sectional. Review wrong, guessed and slow answers.

Week 6 · 2–8 December

- **Quant:** Partnership; Mixture and Alligation.
- **Logical Reasoning:** Linear and Circular Puzzles.
- **Abstract Reasoning:** Cube and dice basics; practise with sketches where useful.
- **VARC:** One or two short RCs and vocabulary recall.
- **Milestone:** 50-question Quant sectional.

Week 7 · 9–15 December

- **Quant:** Problems on Ages; Time, Speed and Distance.
- **Logical Reasoning:** Floor, Box and Month Puzzles.
- **Abstract Reasoning:** Visual tracking and changes in orientation.
- **VARC:** Cloze tests and jumbled paragraphs.
- **Milestone:** 50-question LR sectional.

Week 8 · 16–22 December

- **Quant:** Time and Work; AP/GP.
- **Logical Reasoning:** Data Sufficiency and Decision Making.
- **Abstract Reasoning:** Paper folds and cube patterns.
- **VARC:** RC plus idioms and vocabulary recall.
- **Milestone:** 50-question VARC sectional.

Phase 3 — Broader syllabus coverage (Weeks 9–14)

Week 9 · 23–29 December

- **Quant:** Permutation and Combination; Probability.
- **Logical Reasoning:** Inference and Cause–Effect.
- **Abstract Reasoning:** Mixed abstract reasoning.
- **VARC:** Tone, purpose and inference questions.
- **Milestone:** 100-question mixed practice test; set aside time to review it.

Week 10 · 30 December–5 January

- **Quant:** Mensuration in 2D and 3D.
- **Logical Reasoning:** Assumptions and Course of Action.
- **Abstract Reasoning:** Figure counting and cube questions.
- **VARC:** RC practice and grammar error log.
- **Milestone:** 50-question timed Quant set.

Week 11 · 6–12 January

- **Quant:** Geometry.
- **Logical Reasoning:** Arguments and Conclusions.
- **Abstract Reasoning:** Mirror/Water Images and figure series.
- **VARC:** Vocabulary in context; explain why the correct option fits the passage.
- **Milestone:** 100-question LR/AR sectional.

Week 12 · 13–19 January

- **Quant:** Trigonometry, Logarithms and Number Series.
- **Logical Reasoning:** Clocks/Calendars and Venn Diagrams.
- **Abstract Reasoning:** Mixed abstract reasoning with a timer.
- **VARC:** One RC and mixed verbal questions.
- **Milestone:** 50-question timed Quant set.

Week 13 · 20–26 January

- **Quant:** Data Interpretation and Data Sufficiency.
- **Logical Reasoning:** Matrix and Coded Equations.
- **Abstract Reasoning:** Cubes/Dice plus pattern revision.
- **VARC:** RC and a review of recurring verbal errors.
- **Milestone:** 50-question Quant set with DI.

Week 14 · 27 January–2 February

- **Quant:** Catch-up and formula repair. Finish the most important unfinished chapters.
- **Logical Reasoning:** Non-verbal reasoning and cube/dice revision.
- **Abstract Reasoning:** Catch-up on weak visual patterns.
- **VARC:** Two RCs across the week, with full error review.
- **Milestone:** 100-question LR/AR sectional.

Phase 4 — Repair weak areas and start full mocks (Weeks 15–20)

Week 15 · 3–9 February

- **Quant:** Repair weak topics using basic examples before increasing difficulty.
- **Logical Reasoning:** Revise recurring weak puzzle types and write the setup steps.
- **Abstract Reasoning:** Pattern perception and Paper Cutting/Folding.
- **VARC:** Grammar and vocabulary review plus one RC.
- **Milestone:** Full Mock 1. The review is part of the task, not optional extra work.

Week 16 · 10–16 February

- **Quant:** Mixed revision; include previous errors rather than only fresh questions.
- **Logical Reasoning:** Water/Mirror Images and Missing Number patterns.
- **Abstract Reasoning:** Visual transformation drills.
- **VARC:** Two RCs plus mixed verbal questions.
- **Milestone:** Full Mock 2. Compare section-wise weaknesses with Mock 1.

Week 17 · 17–23 February

- **Quant:** Arithmetic mixed sets under a timer.
- **Logical Reasoning:** Analogies, Classification and weak LR topics.
- **Abstract Reasoning:** Analogy/classification practice where relevant to the question set.
- **VARC:** Short maintenance sessions, 15–20 minutes where possible.
- **Milestone:** Full Mock 3. Select the three highest-value fixes for next week.

Week 18 · 24 February–2 March

- **Quant:** Algebra and Number System mixed questions.
- **Logical Reasoning:** Rotate Seating, Puzzles and Syllogisms.
- **Abstract Reasoning:** Non-verbal speed drills.
- **VARC:** RC speed and inference.
- **Milestone:** Full Mock 4. Note which questions should have been skipped and revisited.

Week 19 · 3–9 March

- **Quant:** Geometry and DI mixed sets.
- **Logical Reasoning:** Statement-based reasoning rotation.
- **Abstract Reasoning:** Repair weak visual-pattern families.
- **VARC:** Vocabulary and grammar speed set.
- **Milestone:** Full Mock 5. Review mistakes under concept, setup, calculation, reading and timing.

Week 20 · 10–16 March

- **Quant:** Timed sectional revision.
- **Logical Reasoning:** Focus on accuracy in high-error question types.
- **Abstract Reasoning:** Abstract pattern speed drills.
- **VARC:** Two RCs and a short mixed verbal drill.
- **Milestone:** Full Mock 6. Compare trends across several mocks rather than judging one score.

Phase 5 — Exam-style refinement (Weeks 21–24)

Week 21 · 17–23 March

- **Quant:** Repair the top three Quant weaknesses.
- **Logical Reasoning:** Repair the top three LR weaknesses.
- **Abstract Reasoning:** Repair the top three AR weaknesses.
- **VARC:** Timed mixed VARC practice.
- **Milestone:** Full Mocks 7 and 8 only if each can be reviewed properly.

Week 22 · 24–30 March

- **Quant:** Calculation speed, formula recall and high-error arithmetic.
- **Logical Reasoning:** Practise the chapters with the most repeated errors.
- **Abstract Reasoning:** Revisit difficult pattern families and avoid guessing without elimination.
- **VARC:** RC plus vocabulary/error-list revision.
- **Milestone:** Full Mocks 9 and 10 if the schedule allows recovery and review.

Week 23 · 31 March–6 April

- **Quant:** Only weak topics and previous errors; avoid starting difficult new theory.
- **Logical Reasoning:** Mixed sets to maintain flexibility.
- **Abstract Reasoning:** Mixed sets; keep the rule of eliminating options deliberately.
- **VARC:** Short RC and familiar verbal rules.
- **Milestone:** Full Mocks 11 and 12 only if timing remains appropriate.

Week 24 · 7–13 April

- **Quant:** Formula sheet and easy/medium questions; build confidence in core methods.
- **Logical Reasoning:** Light practice, clean setups and no unnecessary new topics.
- **Abstract Reasoning:** Light pattern revision.
- **VARC:** Light review; no new difficult topics.
- **Milestone:** Mocks 13–14 are optional and should be attempted only if the official timetable leaves enough time. Protect sleep and routine.

Important adjustment rule: if a topic is still producing repeated errors, pause the roadmap and repair it. The dates are a planning scaffold, not a reason to rush through the syllabus.

5. How to mark a topic honestly

Use the statuses consistently:

- **Not Started:** no serious study/practice yet.
- **In Progress:** concept is being learned or practice is underway.
- **Done:** concept understood, examples solved, timed or focused questions attempted, mistakes reviewed.
- **Needs Revision:** the same error repeats, confidence is low, or the topic is not stable after practice.

Confidence scale

Rating	Meaning	Next action
1	Very unsure	Relearn the concept and solve worked examples
2	Weak	Practise easy questions slowly, then review errors
3	Okay but inconsistent	Use a short timed set and classify mistakes
4	Confident	Mix the topic into timed practice
5	Strong and repeatable	Revisit later to check retention

Confidence is a self-rating. Compare it with accuracy. If confidence is 5 but the latest practice is poor, trust the evidence and revise the topic.

6. Use the Daily Log properly

Record one row for each focused block, not one row for the entire day. For example, if she studies Quant for 50 minutes and then Reasoning for 45 minutes, record two sessions. This shows where time is going and which subject needs attention.

For each session, record:

- **Date and week number:** makes the weekly progress view meaningful.
- **Subject and exact task:** "Percentages — 15 timed questions" is better than "Maths".
- **Planned and actual minutes:** helps detect underestimation or distraction.
- **Questions attempted and correct:** accuracy is correct answers divided by attempts. Leave both at zero for concept-only sessions.
- **Status:** Done, In Progress, Planned or Skipped.
- **Confidence and next action:** make the next study session specific.

Examples of useful next actions: "Redo Q4, Q8 and Q12 without looking at the solution"; "Revise ratio-to-percentage conversions"; "Draw a seating table before testing options"; "Read the inference question before returning to the passage".

7. The error-log method

Every wrong, guessed or unusually slow question should be assigned one main cause:

Error type	What happened	How to fix it
Concept gap	Did not know the rule/formula	Relearn briefly, then solve 3–5 basic examples
Setup error	Understood the topic but formed the wrong equation/table/diagram	Write the setup steps explicitly before calculating
Calculation error	Arithmetic or sign mistake	Redo slowly; add a quick estimation/check step
Reading error	Missed a word, condition, unit or passage qualifier	Underline the limiting word; restate what is asked
Option trap	Chose an attractive but unsupported option	Explain why each wrong option is wrong
Time pressure	Knew it but spent too long	Mark the trigger to skip and return; practise timed sets
Guess without elimination	Answered without a reasoned shortlist	Eliminate options and record why the final answer fits

A useful error note has three parts: **cause → correction → reattempt date**. "Careless mistake" alone is not actionable. For instance: "Forgot to convert minutes to hours → write units on every line → redo two TSD questions on Friday."

8. Mock-test review: quality over quantity

After a diagnostic, sectional or full mock, complete these actions before marking the review as finished:

1. Record the score, time taken and section-wise scores if available.
2. Review every wrong answer.
3. Review guessed answers even when correct; a lucky answer is not secure knowledge.
4. Review questions that took too long, even if they were correct.
5. Categorise each error and write the fix.
6. Pick only the top three fixes for the next practice block. Do not try to repair everything at once.

Compare tests under similar conditions. A shorter test and a full mock are not directly comparable, and a score by itself does not account for difficulty differences. Look for trends across several tests: accuracy, time management, recurring mistakes and whether previously weak chapters are improving.

9. Weekly check-in

Every Sunday, answer these five questions together:

1. What felt easiest this week, and why?
2. Which two topics caused the most errors?
3. Did accuracy, speed or confidence improve? What evidence supports that?
4. Which old errors must be reattempted in the next 2–3 days?
5. What are next week's two main priorities?

Keep the check-in practical. Praise consistency and specific improvements, not only high marks. If a week was difficult, reduce the next target to the most important concepts rather than building a huge backlog.

10. First seven days: gentle launch

This opening plan starts on **Wednesday, 28 October 2026**. Use it to start the system, not to prove a score. Keep the longer routine only if the day allows.

Date	Main focus	Practice / review
Wed 28 Oct	Set up the tracker; Quant: Number System basics; LR: coding-decoding basics	10–15 questions per subject if fundamentals allow; record a baseline note
Thu 29 Oct	Simplification and number properties; alphabet test	Short untimed set first, then a small timed set; log the errors
Fri 30 Oct	Catch-up and mixed practice	15–20 Quant plus 15–20 LR questions; sort mistakes by cause
Sat 31 Oct	Baseline diagnostic	Take a manageable timed diagnostic; record the score without comparing to others; review errors
Sun 1 Nov	Rest + weekly check-in	Choose two weak points and set the next week's targets
Mon 2 Nov	Number System recap; coding-decoding practice	Reattempt Friday/Saturday errors and log accuracy
Tue 3 Nov	Consolidate Week 1	Short mixed set, confidence update and prepare Week 2 topics

11. Exam-pattern reference and official links

The official 2026 MAH-MBA/MMS-CET information brochure describes **200 questions in 150 minutes**: Logical Reasoning 75, Abstract Reasoning 25, Quantitative Aptitude 50 and Verbal Ability/Reading Comprehension 50. It states that the test is in English and has no negative marking. These are details from the **2026** cycle; they should not be assumed to be guaranteed for 2027 until the new official brochure is published.

Final principle

The goal is not to fill every box. The goal is to use the tracker to answer one useful question each day: **What is the next small action that will make her more accurate, more confident or faster?** Then do that action, record it honestly and repeat.
