10. ANALOGIES - EXTENDED VERSION

Basic format: A : B :: C : ?. Matlab A ka B se jo relation hai, wahi C ka answer se hona chahiye. Sabse pehle relationship identify karo; option baad mein dekho.

5-Step Analogy Method

• A:B ko ek simple sentence mein bolo. Example: Teacher : School -> Teacher works in a school.

• Relationship ka naam bolo: workplace, tool, function, synonym, antonym, part-whole, sound, material, cause-effect, group, intensity, etc.

• Same sentence pattern C ke saath apply karo.

• Direction check karo. Puppy : Dog = young -> adult; ulta karoge to relation reverse ho jayega.

• Sirf 'related' hone se option correct nahi hota. Exact relationship match hona chahiye.

Analogy Traps - Inko Avoid Karna

• Teacher : School = person : workplace. Teacher : Chalk = person : tool. Dono related hain, but exact relation different hai.

• Knife : Cut = object : function. Rain : Flood = cause : effect. 'Related' enough nahi.

• Wheel : Car = part : whole. Driver : Car = person : vehicle. Same nahi.

• Puppy : Dog = young : adult. Direction reverse mat karo.

• Synonym analogy mein general association se nahi, closest meaning se answer choose karo.

• Function analogy ko test karne ke liye noun ko action mein bolo: Pen -> write, Knife -> cut.

• Har analogy ke liye ek sentence frame banao. Agar same sentence second pair par fit nahi hota, option galat ho sakta hai.
