MHT-CET MBA/MMS

READING COMPREHENSION - MOCK TEST 2

100 Questions | 10 New Passages | English-Only Test

Total Questions	100
Suggested Time	75 minutes
Format	MCQ - 5 options
Difficulty	Higher than Mock Test 1

Instructions

Attempt all questions. Choose the single best answer. Read each passage carefully. Base your answers on the passage, especially for inference and tone questions. Do not check the answer key until the complete mock is finished.

Focus: main idea, detail, inference, tone, purpose, vocabulary in context, title, and elimination of extreme options.

PASSAGE 1 - The Efficiency Paradox

Efficiency is usually praised because it allows more to be achieved with fewer resources. Yet efficiency can create a hidden weakness when a system is optimized too narrowly. A company that keeps almost no spare inventory may reduce storage costs, for example, but it may also become vulnerable when deliveries are disrupted. Similarly, an organization that schedules every employee at maximum capacity may appear productive while leaving little room to respond to an unexpected demand. The lesson is not that inefficiency is desirable. Rather, a robust system may deliberately preserve some unused capacity because resilience has value that ordinary efficiency calculations can overlook. What seems wasteful from the perspective of a single moment may prove valuable when conditions change.

1. The central argument is that:

A. efficiency is always harmful

B. unused capacity can sometimes strengthen resilience

C. companies should maximize inventory

D. productivity is impossible to measure

E. unexpected demand is rare

2. The inventory example illustrates that:

A. lower storage costs eliminate all risk

B. narrow optimization may increase vulnerability

C. inventory is never useful

D. deliveries are always predictable

E. storage costs are irrelevant

3. Why may maximum employee scheduling create weakness?

A. It guarantees low morale.

B. It leaves little room to respond to unexpected demand.

C. It reduces all productivity.

D. It increases inventory.

E. It eliminates planning.

4. The author does NOT argue that:

A. efficiency can have hidden costs

B. resilience may require some spare capacity

C. inefficiency is always desirable

D. systems can be optimized too narrowly

E. conditions can change

5. The phrase "optimized too narrowly" most nearly means:

A. designed around a limited objective without broader risks

B. made physically smaller

C. improved by many teams

D. planned without deadlines

E. reduced to zero

6. Which inference is best supported?

A. A system designed only for average conditions may struggle during disruptions.

B. More unused capacity always produces better outcomes.

C. Efficiency and resilience can never coexist.

D. Inventory should always be maximized.

E. Unexpected events can be fully predicted.

7. The author's tone is:

A. balanced and cautionary

B. sarcastic

C. celebratory

D. hostile

E. uncertain

8. What do ordinary efficiency calculations overlook?

A. the value of resilience

B. the cost of storage

C. employee schedules

D. delivery times

E. productivity measures

9. Which statement would the author most likely agree with?

A. Some apparent slack can be an intentional form of protection.

B. Every unused resource is waste.

C. Resilience has no economic value.

D. Businesses should avoid efficiency.

E. Only large companies need spare capacity.

10. Best title:

A. When Efficiency Needs a Safety Margin

B. Why Efficiency Always Fails

C. The End of Productivity

D. Inventory Management Basics

E. How to Eliminate Spare Capacity

PASSAGE 2 - Expertise and Explanation

Experts often know far more about a subject than they realize they know. Because some concepts have become automatic to them, they can underestimate how difficult those concepts are for beginners. This is one reason expert explanation can fail even when the speaker is highly knowledgeable. Effective teaching requires more than possessing correct information; it requires recognizing which steps are invisible to a novice and making those steps explicit. The best explanations therefore do not necessarily contain the most information. They contain the information needed at the right level, in an order the learner can follow. Expertise becomes educationally useful when knowledge is reorganized for another person's understanding.

11. The main idea is that effective explanation requires experts to:

A. display maximum knowledge

B. make hidden steps explicit

C. avoid simplifying anything

D. use technical vocabulary

E. teach only advanced concepts

12. Experts may underestimate difficulty because:

A. they dislike beginners

B. some concepts have become automatic

C. they lack information

D. beginners know too much

E. teaching is always easy

13. According to the passage, effective teaching requires:

A. only accurate information

B. recognizing invisible steps and presenting them clearly

C. maximizing the amount of material

D. avoiding structure

E. speaking as quickly as possible

14. "At the right level" suggests that information should be:

A. appropriate to the learner current understanding

B. as advanced as possible

C. kept secret

D. reduced to slogans

E. identical for every audience

15. Which statement is NOT supported?

A. Experts can overlook beginner difficulties.

B. Good explanations need structure.

C. More information is always better.

D. Teaching may require reorganizing knowledge.

E. Automatic knowledge can be invisible to experts.

16. The passage implies that expertise alone:

A. guarantees good teaching

B. is insufficient for effective teaching

C. makes beginners unnecessary

D. reduces knowledge

E. prevents communication

17. The phrase "reorganized for another person's understanding" implies that:

A. the same knowledge may need a different presentation

B. experts should change facts

C. teachers should omit all difficult ideas

D. knowledge has no fixed meaning

E. beginners should teach experts

18. Author's tone:

A. analytical and instructional

B. mocking

C. emotional

D. dismissive

E. comic

19. What would most improve an expert's explanation?

A. Adding every possible detail

B. Identifying steps a novice is likely to miss

C. Using more jargon

D. Removing all examples

E. Avoiding sequence

20. Best title:

A. Turning Expertise into Effective Explanation

B. Why Experts Know Too Little

C. Teaching Without Knowledge

D. The Problem with Beginners

E. More Information Means Better Teaching

PASSAGE 3 - The Architecture of Choice

People do not make decisions in a vacuum. The way options are arranged can influence which choice appears convenient, visible, or normal. A cafeteria that places fruit near the beginning of a serving line may make fruit easier to select, even without banning less healthy foods. Such design is sometimes called a choice architecture. Critics worry that arranging options can become manipulative, especially when the designer goals are hidden. Supporters argue that all environments already shape behaviour to some extent, so the relevant question is whether that influence is transparent and aligned with people interests. The debate is therefore less about whether choices are influenced and more about how such influence should be exercised.

21. The passage mainly discusses:

A. why people lack freedom

B. how the arrangement of choices can influence behaviour

C. why cafeterias should ban unhealthy foods

D. how advertisements work

E. why decisions are random

22. What is choice architecture?

A. the physical construction of buildings

B. the arrangement of options that can influence choices

C. a legal voting system

D. a method of accounting

E. a psychological diagnosis

23. The fruit example shows that:

A. ban policies are necessary

B. placement can affect convenience and selection

C. people dislike fruit

D. cafeterias manipulate everyone

E. healthy food is always cheaper

24. A criticism mentioned is that choice design may become:

A. expensive

B. manipulative

C. ineffective

D. irrelevant

E. scientific

25. Supporters argue that:

A. environments already influence behaviour

B. all manipulation is harmless

C. people never have preferences

D. choices should be hidden

E. food should be regulated

26. The debate is mainly about:

A. whether influence exists at all

B. how influence should be exercised

C. whether cafeterias are profitable

D. whether people can choose

E. whether fruit is healthy

27. Which inference is supported?

A. Transparency may matter when designing environments that steer choices.

B. Any influence on behaviour is necessarily unethical.

C. Choice architecture eliminates freedom.

D. Hidden goals are always beneficial.

E. Only food environments shape decisions.

28. The author's tone is:

A. nuanced and balanced

B. angry

C. sarcastic

D. dismissive

E. absolute

29. Which statement is NOT consistent with the passage?

A. Option arrangement can shape behaviour.

B. Designers may have goals.

C. Critics worry about manipulation.

D. All decisions are completely independent of context.

E. Supporters see some influence as unavoidable.

30. Best title:

A. How the Design of Options Shapes Choice

B. Why Choice Is Impossible

C. The Science of Cafeterias

D. Banning Unhealthy Foods

E. Decision-Making Without Context

PASSAGE 4 - Memory and Reconstruction

Human memory is not a perfect recording system. Remembering involves reconstruction, meaning that a person may retain the general outline of an event while particular details are altered over time. This does not make every memory false. It does mean that confidence in a memory and accuracy of that memory are not necessarily identical. New information, repeated retelling, and expectations can influence what is later recalled. For this reason, a vivid recollection should not automatically be treated as precise evidence. A careful approach asks how the memory was formed, what information may have been introduced later, and whether independent evidence supports the recollection.

31. The central claim is that memory:

A. is always false

B. records events perfectly

C. is reconstructive and can be influenced over time

D. has no value

E. becomes more accurate when vivid

32. The passage distinguishes between:

A. memory and attention

B. confidence and accuracy

C. events and expectations

D. evidence and knowledge

E. time and place

33. A vivid memory should NOT automatically be treated as:

A. evidence at all

B. precise evidence

C. an event

D. a recollection

E. a possibility

34. What can influence later recall?

A. only age

B. new information, retelling, and expectations

C. nothing after the event

D. independent evidence only

E. weather

35. The phrase reconstruction suggests that remembering:

A. replays a perfect recording

B. can involve rebuilding details from stored information

C. is impossible

D. depends only on confidence

E. never changes

36. Which inference is strongest?

A. Independent evidence can help evaluate a confident recollection.

B. Confidence proves accuracy.

C. All vivid memories are unreliable.

D. Memory has no practical use.

E. Retelling always improves accuracy.

37. The author's tone is:

A. cautious and analytical

B. celebratory

C. sarcastic

D. hostile

E. comic

38. Which is NOT suggested as a careful approach?

A. examining how memory formed

B. considering later information

C. checking independent evidence

D. assuming confidence equals accuracy

E. asking what may have changed

39. What does "not necessarily identical" mean?

A. confidence and accuracy can differ

B. they are always opposite

C. they are always equal

D. accuracy is irrelevant

E. confidence is impossible

40. Best title:

A. Why Memory Requires Careful Interpretation

B. Memory Is Always False

C. The Power of Confidence

D. How to Forget Events

E. Why Evidence Is Unnecessary

PASSAGE 5 - Innovation and Constraints

Innovation is often associated with freedom: more resources, more options, and fewer restrictions are expected to produce more ideas. Yet constraints can sometimes stimulate creativity. A limited budget may force a team to simplify a product, while a strict technical requirement may lead engineers to discover a novel approach. Constraints do not automatically produce innovation; excessive restrictions can make experimentation impossible. Their value lies in directing attention toward a specific problem and forcing choices among alternatives. The productive question is therefore not whether constraints are good or bad in themselves, but whether they narrow the problem enough to encourage inventive solutions without closing off meaningful possibilities.

41. The main argument is that:

A. constraints always improve creativity

B. some constraints can encourage innovation when they remain workable

C. freedom prevents creativity

D. budgets have no effect on design

E. restrictions should be unlimited

42. The budget example shows that constraints may:

A. force useful simplification

B. eliminate all choices

C. guarantee innovation

D. reduce technical knowledge

E. prevent experimentation

43. Excessive restrictions can:

A. make experimentation impossible

B. guarantee originality

C. increase resources

D. remove all problems

E. improve every solution

44. The value of constraints lies partly in:

A. directing attention toward a specific problem

B. making choices unlimited

C. removing all uncertainty

D. eliminating alternatives entirely

E. reducing curiosity

45. Meaningful possibilities refers to:

A. options still worth exploring

B. all possible options in the world

C. financial resources

D. technical standards

E. past ideas

46. Which inference is best supported?

A. A useful constraint focuses effort without eliminating discovery.

B. The fewer options people have, the better they innovate.

C. Creative work needs no experimentation.

D. Any strict rule produces originality.

E. Innovation requires unlimited funding.

47. The author's tone is:

A. balanced and exploratory

B. hostile

C. absolute

D. comic

E. dismissive

48. The author rejects the simple idea that constraints are:

A. always good or always bad

B. sometimes useful

C. relevant to innovation

D. able to focus attention

E. capable of becoming excessive

49. Which statement is NOT supported?

A. Constraints can simplify problems.

B. Technical requirements can spark new approaches.

C. Excessive restrictions can be harmful.

D. Every constraint automatically creates creativity.

E. Innovation depends partly on workable freedom.

50. Best title:

A. When Constraints Can Create Creativity

B. Why Freedom Destroys Innovation

C. Innovation Without Choices

D. Budgets and Engineers

E. The End of Experimentation

PASSAGE 6 - The Visibility of Work

Some kinds of work are easy to notice because their outputs are visible: a finished building, a published article, or a completed software feature. Other forms of work are less visible, such as maintenance, coordination, checking, and preventing problems before they occur. Organizations that evaluate performance only through visible outputs may therefore undervalue activities that preserve reliability. This can create a strange incentive: workers may prioritize tasks that can be displayed while postponing less visible tasks that are nevertheless essential. A sensible evaluation system should recognize both production and prevention. What matters is not only what was created, but also what failures, delays, or costs were avoided.

51. The passage mainly argues that organizations should:

A. measure only visible outputs

B. recognize invisible preventive work as well as production

C. avoid evaluating workers

D. prioritize presentation over reliability

E. remove maintenance tasks

52. Which work is described as less visible?

A. construction

B. publication

C. maintenance and coordination

D. software creation

E. all physical work

53. Why may visible-output-only evaluation create a problem?

A. Workers may neglect essential but less visible tasks.

B. Workers become more innovative automatically.

C. Maintenance becomes easier.

D. Visible outputs disappear.

E. Prevention becomes profitable.

54. The phrase "strange incentive" refers to:

A. pressure to choose what can be displayed

B. a reward for preventing failure

C. a salary increase

D. a technical system

E. an unexpected promotion

55. A sensible evaluation system should recognize:

A. production and prevention

B. only speed

C. only results

D. only teamwork

E. only visible work

56. The final sentence suggests value can be measured by:

A. what was created and what was avoided

B. only products

C. only revenue

D. only employee visibility

E. only delays

57. Which inference is supported?

A. Some important contributions may be overlooked because they leave little visible evidence.

B. Invisible work has no measurable value.

C. Preventing problems is always more important than producing.

D. Visible outputs should be ignored.

E. Organizations cannot evaluate reliability.

58. The author's tone is:

A. practical and critical

B. sarcastic

C. angry

D. celebratory

E. uncertain

59. Which is NOT mentioned as less visible activity?

A. checking

B. coordination

C. maintenance

D. preventing problems

E. advertising

60. Best title:

A. Measuring the Work You Cannot Easily See

B. Why Visible Work Is Always Better

C. The End of Maintenance

D. Producing Without Prevention

E. How to Display Every Task

PASSAGE 7 - Cities and Informal Knowledge

Urban planning often relies on maps, statistics, and formal surveys, but residents possess another type of information: practical knowledge gained from repeated experience of a place. Residents may know which path floods after heavy rain, where traffic becomes difficult at a particular hour, or which public space feels unsafe after dark. Such knowledge is not automatically complete or unbiased, but neither is it irrelevant simply because it is informal. Planning improves when local experience is combined with systematic evidence. The challenge is to collect resident observations in a way that can be compared, verified, and incorporated into larger planning decisions without treating every individual account as universally representative.

61. The central idea is that urban planning should:

A. ignore resident experience

B. use informal local knowledge alongside systematic evidence

C. replace data with anecdotes

D. trust every resident claim

E. avoid surveys

62. Residents may know:

A. only official statistics

B. practical patterns not captured easily by formal tools

C. all city history

D. future traffic conditions with certainty

E. every unsafe location

63. The author says resident knowledge is:

A. always unbiased

B. always complete

C. not automatically complete or unbiased, but potentially useful

D. irrelevant

E. better than all formal evidence

64. What is the challenge in using informal knowledge?

A. Collecting it so it can be compared and verified

B. Preventing residents from speaking

C. Removing all statistics

D. Treating every account as universally representative

E. Avoiding local observations

65. Universally representative means:

A. applicable to everyone or the whole area

B. verified by science

C. easy to collect

D. legally required

E. historically accurate

66. Which inference is best supported?

A. Local observations can add value when integrated carefully rather than accepted uncritically.

B. Formal evidence is unnecessary.

C. Every resident sees the city identically.

D. Anecdotes should replace maps.

E. Informal knowledge is always superior.

67. The author's tone is:

A. inclusive and cautious

B. dismissive

C. hostile

D. sarcastic

E. absolute

68. Which is NOT an example of local practical knowledge?

A. flood-prone paths

B. traffic at a particular hour

C. unsafe-feeling spaces

D. official census totals

E. repeated experience

69. Why should resident accounts not automatically be treated as universal?

A. Individual experiences may not represent the whole area.

B. Residents never observe patterns.

C. Formal surveys are always perfect.

D. Local knowledge is illegal.

E. Cities have no patterns.

70. Best title:

A. Combining Local Experience with Urban Data

B. Why Maps Should Be Rejected

C. The Problem with Residents

D. Statistics Without Streets

E. Planning Without Evidence

PASSAGE 8 - The Problem with Simple Metrics

Metrics are useful because they turn complicated activity into quantities that can be compared. But the convenience of a metric can encourage organizations to treat the measure as the goal itself. A school that is judged heavily by test scores may devote less attention to qualities that are harder to quantify, even when those qualities matter. A business that rewards employees only for the number of calls completed may increase call volume while reducing the quality of conversations. The problem is not measurement. It is confusing what is easy to count with what is truly important. Good evaluation systems therefore use metrics as evidence about performance rather than as complete definitions of performance.

71. The main problem discussed is:

A. measurement itself

B. confusing measurable indicators with the thing that truly matters

C. test scores

D. business calls

E. schools

72. Why are metrics useful?

A. They make complex activity easier to compare.

B. They always capture complete performance.

C. They eliminate judgement.

D. They guarantee quality.

E. They remove goals.

73. What may happen when test scores dominate school evaluation?

A. Less attention may be given to harder-to-measure qualities.

B. All learning improves.

C. Teachers stop measuring anything.

D. Scores become meaningless.

E. Schools eliminate exams.

74. The call-volume example shows that:

A. a metric can improve quantity while harming quality

B. calls are unnecessary

C. businesses cannot use numbers

D. conversation quality never matters

E. employees dislike measurement

75. The phrase "as the goal itself" implies:

A. the measure becomes something pursued for its own sake

B. the metric is ignored

C. the goal becomes impossible

D. measurement is removed

E. quality is guaranteed

76. Which inference is strongest?

A. Organizations should compare metrics with broader outcomes before judging performance.

B. Numbers are always misleading.

C. Qualitative factors should replace all metrics.

D. Metrics are useless.

E. Test scores should never be used.

77. The author's tone is:

A. critical but not anti-measurement

B. angry

C. sarcastic

D. humorous

E. celebratory

78. The author would agree that:

A. metrics are evidence, not complete definitions of success

B. countable outcomes are always enough

C. measurement should be abandoned

D. quality cannot be evaluated

E. only schools misuse metrics

79. Which is NOT supported?

A. Metrics can simplify comparison.

B. Easy-to-count outcomes may distort priorities.

C. Quality can be harder to quantify.

D. Every metric fully represents performance.

E. Good evaluation can use metrics as evidence.

80. Best title:

A. When the Measure Becomes the Target

B. Why Numbers Are Useless

C. The End of Evaluation

D. Test Scores and Schools

E. Business Calls Without Metrics

PASSAGE 9 - Curiosity and Productive Doubt

Curiosity is often associated with the desire to find answers, but it can also involve staying with an unanswered question. In research, for example, productive uncertainty can prevent a premature conclusion. A researcher who is too eager to settle a question may overlook evidence that does not fit the preferred explanation. Doubt, however, can become unproductive when it turns into the assumption that no claim can ever be trusted. The useful position lies between blind certainty and endless suspicion: ask questions, examine evidence, revise beliefs when necessary, and still allow conclusions when the evidence is sufficiently strong.

81. The passage mainly presents curiosity as:

A. a desire for immediate answers

B. a willingness to examine questions without premature closure

C. doubt that prevents all conclusions

D. rejection of evidence

E. certainty about research

82. Why can productive uncertainty be useful?

A. It can prevent premature conclusions.

B. It eliminates all disagreement.

C. It guarantees the preferred explanation.

D. It removes the need for evidence.

E. It makes research slower only.

83. What may happen when a researcher is too eager to settle a question?

A. Contradictory evidence may be overlooked.

B. All evidence improves.

C. Doubt disappears permanently.

D. Research becomes unbiased.

E. No conclusion is possible.

84. Doubt becomes unproductive when:

A. it leads to careful questioning

B. it assumes no claim can ever be trusted

C. it encourages evidence review

D. beliefs are revised

E. questions remain open briefly

85. The useful position lies between:

A. certainty and confusion

B. blind certainty and endless suspicion

C. knowledge and ignorance

D. facts and opinions

E. research and communication

86. Which inference is supported?

A. Being open to revision does not require refusing to reach conclusions.

B. Strong evidence should always be rejected.

C. Suspicion is better than evidence.

D. Curiosity requires permanent uncertainty.

E. Conclusions should never change.

87. The author's tone is:

A. measured and reflective

B. hostile

C. comic

D. absolute

E. dismissive

88. What does "premature conclusion" mean?

A. a conclusion reached before sufficient evaluation

B. a conclusion after strong evidence

C. a rejected hypothesis

D. a final research report

E. an impossible answer

89. Which action is recommended?

A. Examine evidence and revise beliefs when necessary.

B. Trust every claim.

C. Reject every conclusion.

D. Choose a preferred answer first.

E. Avoid uncertainty entirely.

90. Best title:

A. Curiosity, Doubt and the Discipline of Evidence

B. Why Answers Should Be Immediate

C. The Value of Suspicion Alone

D. Research Without Conclusions

E. Certainty as the Best Method

PASSAGE 10 - The Social Meaning of Public Spaces

Public spaces are often evaluated through physical features such as benches, lighting, paths, and cleanliness. These features matter, but a successful public space also depends on social patterns. A square may be beautifully designed and still feel empty if few people use it. Conversely, a modest space may become lively because people regularly meet there, observe one another, and develop shared expectations about how the place is used. This suggests that public-space design is partly a social project. Physical design can invite activity, but repeated human use gives a place much of its character. Planners therefore need to consider not only what a space contains, but what kinds of interactions it is likely to support.

91. The passage argues that successful public spaces depend on:

A. physical design alone

B. physical features and social patterns

C. cleanliness only

D. large size

E. strict rules

92. A beautifully designed square may still feel empty if:

A. few people use it

B. it has benches

C. it is clean

D. paths exist

E. lighting is present

93. A modest space may become lively because:

A. people develop repeated patterns of use

B. it is expensive

C. it has no design

D. rules are strict

E. it is always larger

94. The phrase "social project" suggests that planning involves:

A. supporting patterns of human interaction

B. only construction work

C. government budgets

D. private ownership

E. traffic control

95. Physical design can:

A. invite activity

B. guarantee social life

C. replace human use

D. eliminate shared expectations

E. determine all behaviour

96. What gives a place much of its character?

A. repeated human use

B. architecture alone

C. cleanliness alone

D. lighting alone

E. size

97. Which inference is strongest?

A. Design choices are more effective when planners consider how people are likely to use the space.

B. A beautiful space will always succeed.

C. Social interaction cannot be influenced by design.

D. Public spaces need no planning.

E. People use all spaces in the same way.

98. The author's tone is:

A. observational and balanced

B. sarcastic

C. angry

D. pessimistic

E. humorous

99. Which is NOT listed as a physical feature?

A. benches

B. lighting

C. paths

D. cleanliness

E. parking fees

100. Best title:

A. Designing Public Spaces for Human Interaction

B. Why Benches Solve Every Problem

C. Public Spaces Without People

D. The Cost of Cleanliness

E. Architecture Without Society

ANSWER KEY & HINGLISH EXPLANATIONS

The test is fully English. Explanations below are in simple Hinglish for revision.

1. B - unused capacity can sometimes strengthen resilience

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

2. B - narrow optimization may increase vulnerability

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

3. B - It leaves little room to respond to unexpected demand.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

4. C - inefficiency is always desirable

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

5. A - designed around a limited objective without broader risks

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

6. A - A system designed only for average conditions may struggle during disruptions.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

7. A - balanced and cautionary

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

8. A - the value of resilience

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

9. A - Some apparent slack can be an intentional form of protection.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

10. A - When Efficiency Needs a Safety Margin

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

11. B - make hidden steps explicit

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

12. B - some concepts have become automatic

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

13. B - recognizing invisible steps and presenting them clearly

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

14. A - appropriate to the learner current understanding

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

15. C - More information is always better.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

16. B - is insufficient for effective teaching

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

17. A - the same knowledge may need a different presentation

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

18. A - analytical and instructional

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

19. B - Identifying steps a novice is likely to miss

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

20. A - Turning Expertise into Effective Explanation

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

21. B - how the arrangement of choices can influence behaviour

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

22. B - the arrangement of options that can influence choices

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

23. B - placement can affect convenience and selection

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

24. B - manipulative

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

25. A - environments already influence behaviour

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily

extreme hain.

26. B - how influence should be exercised

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

27. A - Transparency may matter when designing environments that steer choices.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

28. A - nuanced and balanced

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

29. D - All decisions are completely independent of context.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

30. A - How the Design of Options Shapes Choice

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

31. C - is reconstructive and can be influenced over time

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

32. B - confidence and accuracy

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

33. B - precise evidence

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

34. B - new information, retelling, and expectations

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

35. B - can involve rebuilding details from stored information

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

36. A - Independent evidence can help evaluate a confident recollection.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

37. A - cautious and analytical

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

38. D - assuming confidence equals accuracy

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

39. A - confidence and accuracy can differ

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

40. A - Why Memory Requires Careful Interpretation

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

41. B - some constraints can encourage innovation when they remain workable

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

42. A - force useful simplification

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

43. A - make experimentation impossible

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

44. A - directing attention toward a specific problem

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

45. A - options still worth exploring

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

46. A - A useful constraint focuses effort without eliminating discovery.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

47. A - balanced and exploratory

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

48. A - always good or always bad

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

49. D - Every constraint automatically creates creativity.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

50. A - When Constraints Can Create Creativity

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

51. B - recognize invisible preventive work as well as production

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

52. C - maintenance and coordination

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

53. A - Workers may neglect essential but less visible tasks.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

54. A - pressure to choose what can be displayed

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

55. A - production and prevention

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

56. A - what was created and what was avoided

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

57. A - Some important contributions may be overlooked because they leave little visible evidence.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

58. A - practical and critical

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

59. E - advertising

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

60. A - Measuring the Work You Cannot Easily See

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

61. B - use informal local knowledge alongside systematic evidence

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

62. B - practical patterns not captured easily by formal tools

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

63. C - not automatically complete or unbiased, but potentially useful

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily

extreme hain.

64. A - Collecting it so it can be compared and verified

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

65. A - applicable to everyone or the whole area

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

66. A - Local observations can add value when integrated carefully rather than accepted uncritically.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

67. A - inclusive and cautious

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

68. D - official census totals

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

69. A - Individual experiences may not represent the whole area.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

70. A - Combining Local Experience with Urban Data

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

71. B - confusing measurable indicators with the thing that truly matters

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

72. A - They make complex activity easier to compare.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

73. A - Less attention may be given to harder-to-measure qualities.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

74. A - a metric can improve quantity while harming quality

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

75. A - the measure becomes something pursued for its own sake

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

76. A - Organizations should compare metrics with broader outcomes before judging performance.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

77. A - critical but not anti-measurement

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

78. A - metrics are evidence, not complete definitions of success

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

79. D - Every metric fully represents performance.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

80. A - When the Measure Becomes the Target

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

81. B - a willingness to examine questions without premature closure

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

82. A - It can prevent premature conclusions.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

83. A - Contradictory evidence may be overlooked.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

84. B - it assumes no claim can ever be trusted

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

85. B - blind certainty and endless suspicion

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

86. A - Being open to revision does not require refusing to reach conclusions.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

87. A - measured and reflective

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

88. A - a conclusion reached before sufficient evaluation

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

89. A - Examine evidence and revise beliefs when necessary.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

90. A - Curiosity, Doubt and the Discipline of Evidence

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

91. B - physical features and social patterns

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

92. A - few people use it

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

93. A - people develop repeated patterns of use

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

94. A - supporting patterns of human interaction

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

95. A - invite activity

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

96. A - repeated human use

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

97. A - Design choices are more effective when planners consider how people are likely to use the space.

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

98. A - observational and balanced

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

99. E - parking fees

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

100. A - Designing Public Spaces for Human Interaction

Hinglish explanation: Yeh option passage ke exact point ya clearly supported inference ko match karta hai. Baaki options ya to passage ke against hain, ya sirf ek chhote part ko represent karte hain, ya unnecessarily extreme hain.

SCORE & ERROR ANALYSIS

Score: _____ / 100

Score	Level	Next Step
85-100	Strong	Increase difficulty and improve speed.
70-84	Good	Review inference, tone, and close-option errors.
55-69	Developing	Redo wrong passages and strengthen mapping.
Below 55	Foundation	Re-read the RC guide and practise untimed first.

5-Line Progress Check

1. Passage with most mistakes: _____
2. Question type I struggled with: _____
3. Main mistake pattern: _____
4. Did I exceed 75 minutes? YES / NO
5. One change for the next RC mock: _____
